

On the commencement of this Plan, it is estimated that the share components of local water utility access licences total 16,400 ML/year.

[16] Clause 25 Share components of unregulated river access licences

Omit the clause.

[17] Clause 26 Share components of aquifer access licences

Omit the clause.

[18] Clause 27 Share components of aquifer (general security) access licences

Omit the clause.

[19] Clause 30 General

Omit the clause. Insert instead:

Clause 30 General

Clause 31 (3) does not apply if an authorisation under section 8 of the *Water Supply (Critical Needs) Act 2019* in relation to the development of the Chaffey Dam to Dungowan Village pipeline is in force.

Note. If an authorisation referred to above is in force, alternate rules will apply as set out in the authorisation.

[20] Part 7

Omit the Part. Insert instead:

Part 7 Limits to the availability of water

Note. This Part sets out the rules for managing the availability of water for extraction in accordance with the following long-term limits on extraction:

- (a) a long-term average annual extraction limit, and
- (b) a long-term average sustainable diversion limit.

Division 1 Calculations under this Part

38 Exclusions, inclusions and variations in calculations

- (1) This clause applies to the calculation of the following:
 - (a) the long-term average annual extraction limit under clause 39,
 - (b) the average annual extraction under clause 40,
 - (c) the annual permitted take under clause 44,
 - (d) the annual actual take under clause 44.

Note. *Annual permitted take* and *annual actual take* are defined in the Dictionary.

- (2) The calculation by the Minister which this clause applies must:

(a) exclude the following:

- (i) allocations assigned from an access licence in the water source to an access licence in another water source under section 71T of the Act,
- (ii) environmental releases provided for in Part 6,
- (iii) in relation to average annual extraction under clause 40 only, water committed as licensed environmental water under section 8F of the Act, and

(b) include the following:

- (i) allocations assigned to an access licence in the water source from an access licence in another water source under section 71T of the Act,
- (ii) the extraction of water from Dungowan Dam water storage under a local water utility access licence.

(3) The calculation by the Minister of the long-term average annual extraction limit under clause 39 must be adjusted by a volume that appropriately reflects the following:

- (a) any change to the amount of water committed as licensed environmental water under section 8F of the Act,
- (b) the share components of water access licences in the water source that are subject to a dealing under section 71U of the Act.

Division 2 Long-term average annual extraction limit

39 Calculation of the long-term average annual extraction limit

(1) Following the end of each water year, the Minister must calculate the long-term average annual extraction limit for the water source in accordance with this clause and clause 38.

(2) The long-term average annual extraction limit is the lesser of the following:

- (a) the average annual extraction, based on the following:
 - (i) the water storages and water use development that existed in 2007/2008,
 - (ii) the basic landholder rights and access licence share components that existed on 1 July 2010,
 - (iii) the rules set out in the *Water Sharing Plan for the Peel Valley Regulated, Unregulated, Alluvium and Fractured Rock Water Sources 2010* that apply to the water source as at 1 July 2010,
 - (iv) the level of development for plantation forestry that existed on 30 June 2009.

Note. *Planation forestry* is defined in the Dictionary.

- (b) the average annual extraction calculated under Cap baseline conditions as agreed under the Murray-Darling Basin Agreement that was in place at the commencement of the *Water Sharing Plan for the Peel Valley Regulated, Unregulated, Alluvium and Fractured Rock Water Sources 2010*,

Note. *Murray-Darling Basin Agreement* is defined in the Dictionary.

plus the long-term average annual extraction from Dungowan Dam water storage under a local water utility access licence.

Note. *Cap baseline conditions* are defined in the Dictionary.

- (3) For the purposes of subclause (2), average annual extraction is to be calculated over the duration of available water climate records using the hydrological computer model approved by the Minister.

Notes.

- 1 Under section 8F of the Act the long-term average annual extraction limit is to be varied by any change to licensed environmental water, excluding water committed under section 8C of the Act.
- 2 The long-term average annual extraction limit recognises the effect of climatic variability on the availability of water, in accordance with section 20 (2) (c) of the Act as historic climate and river flow information is used in its determination.

40 Calculation of average annual extraction

- (1) Following the end of each water year, the Minister is to calculate average annual extraction from the water source over the preceding ten water years plus average annual extraction from Dungowan Dam water storage by Tamworth Regional Council over the same ten water years.
- (2) If required under clause 42 (2), the Minister is to calculate the sum of the following:
 - (a) the average annual extraction from the water source using the hydrological computer model approved by the Minister, over the duration of available climate records, based on the following:
 - (i) the water storages and water use development that existed in that water year,

- (ii) the basic landholder rights and access licence share components that existed in that water year,
 - (iii) the rules in this Plan, that applied in that water year, and
 - (iv) the level of development for plantation forestry in that water year,
- (b) the long-term average annual extraction from Dungowan Dam water storage by Tamworth Regional Council.

41 Calculation of growth in extraction by Tamworth Regional Council

- (1) Following the end of each water year, the Minister, is to calculate the average annual extraction by the following access licences held by Tamworth Regional Council:
- (a) access licences specified in Schedule 1,
 - (b) access licences resulting from a dealing involving an access licence specified in Schedule 1,

(Tamworth Regional Council access licences).

- (2) Following the calculation under subclause (1), the Minister is to calculate the growth in extraction by Tamworth Regional Council by calculating the difference between the average annual extraction calculated under subclause (1) and the average annual extraction by the Tamworth Regional Council access licences under Cap baseline conditions.
- (3) If the growth calculated in accordance with subclause (2) is less than zero, the growth is taken to be zero.
- (4) For the purposes of subclause (1) and (2), average annual extraction is to be calculated over the duration of available water climate records using the hydrological computer model approved by the Minister.

42 Assessment of compliance with the long-term average annual extraction limit

- (1) Following the end of each water year, the Minister is to calculate the average annual extraction from the water source over the preceding ten water years plus average annual extraction from Dungowan Dam water storage by Tamworth Regional Council over the same ten water years, based on the development conditions that are used to determine the long-term average annual extraction limit in clause 39 (2) (a).
- (2) If average annual extraction calculated under clause 40 (1) exceeds average annual extraction calculated under subclause (1) by more than 20%, then a calculation in accordance with clause 40 (2) is to be undertaken.

- (3) There is non-compliance with the long-term average annual extraction limit if the sum of average annual extraction calculated under clause 40 (2) minus 95% of the growth in extraction by Tamworth Regional Council as calculated under clause 41, exceeds the long-term average annual extraction limit by 3% or more.

Division 3 Long-term average sustainable diversion limit

43 Calculation of the long-term average sustainable diversion limit

- (1) Subject to any variation in accordance with subclause (2), the long-term average sustainable diversion limit for the water source is:
- (a) the component of the baseline diversion limit the Namoi SDL resource unit as determined under Schedule 3 of the Basin Plan, that in the Minister's opinion is attributable to the water source, minus
 - (b) the component of the local reduction amount for the Namoi SDL resource unit as determined under Schedule 2 of the Basin Plan, that in the Minister's opinion is attributable to the water source, minus
 - (c) the component of the shared reduction amount for the Namoi SDL resource unit as determined under section 6.05 of the Basin Plan, that in the Minister's opinion is attributable to the water source.
- (2) The long-term average sustainable diversion limit is to be varied as determined under Chapter 7 of the Basin Plan.

Notes.

- 1 *Baseline diversion limit* and *SDL resource unit shared reduction amount* are defined in the Dictionary.
- 2 The long-term average sustainable diversion limit for the Namoi SDL resource unit as specified in Schedule 2 of the Basin Plan covers extractions from the water source, the Upper and Lower Namoi Regulated River Water Sources, the Peel Unregulated River Water Sources and the Namoi Unregulated River Water Sources.
- 3 Schedule 2 of the Basin Plan Specifies a local reduction amount of 20 GL.

44 Calculation of annual permitted take and annual actual take for the water year

- (1) Following the end of each water year, the Minister is to calculate annual permitted take and annual actual take of water for the previous water year in accordance with Division 2 of Part 4 of Chapter 6 of the Basin Plan.
- (2) For the purposes of the calculation, references to the SDL resource unit in Division 2 of Part 4 of Chapter 6 of the Basin Plan are taken to be references to the water source.

Notes.

- 1 Take of licensed environmental water and under licences held by the Commonwealth Environmental Water Holder are not included in the calculation of annual permitted take and annual actual take as they fall outside the definition of take for consumptive use.
- 2 *Consumptive use* and *take* are defined in section 4 of the *Water Act 2007* of the Commonwealth.

45 Assessment of compliance with the long-term average sustainable diversion limit

- (1) Following the calculation under clause 44 after the end of each water year, the Minister is to undertake an assessment of compliance with the long-term average sustainable diversion limit, in accordance with the requirements of Division 2 of Part 4 of Chapter 6 of the Basin Plan.
- (2) There is non-compliance with the long-term average sustainable diversion limit in the circumstances set out in Division 2 of Part 4 of Chapter 6 of the Basin Plan.

Division 4 Compliance with extraction and diversion limits

46 Action following non-compliance

- (1) Subject to subclauses (2) to (4), if an assessment under clauses 42 or 45 demonstrates non-compliance with either the long-term average annual extraction limit or the long-term average sustainable diversion limit, the Minister is to reduce the limit of the sum of available water determinations under clause 47 (2) for regulated river (general security) access licences.

Note. Action under this clause will have effect for the water year following the assessment, which will be two water years after the non-compliance occurred.

- (2) The Minister may take the action specified in subclause (1) if an assessment under clause 45 would have demonstrated non-compliance with the long-term average sustainable diversion limit but for there being a reasonable excuse, as provided for in Division 2 of Part 4 of Chapter 6 of the Basin Plan.
- (3) An action in accordance with subclause (1) and (2) is to be taken to the extent to which and only for as long as, the Minister considers the following is necessary:
 - (a) in the case of non-compliance with the long-term average annual extraction limit— to return long-term average annual extraction in the water source minus 95% of the growth in extractions by Tamworth Regional Council to the long-term average annual extraction limit,

- (b) in the case of non-compliance with the long-term average sustainable diversion limit— to meet the requirements of Division 2 of Part 4 of Chapter 6 of the Basin Plan,
 - (c) in the case where non-compliance with the long-term average sustainable diversion limit would have occurred but for there being a reasonable excuse— to meet the requirements of Division 2 of Part 4 of Chapter 6 of the Basin Plan.
- (4) Before taking action under subclause (1) or (2) the Minister may consult with water user representatives on the following:
- (a) the data used for the calculations under Divisions 2 and 3, and
 - (b) the proposed actions under this Division.

Division 5 Available water determinations

47 General

- (1) Available water determinations for access licences are to be expressed as one of the following:
- (a) for an access licence specifying the share component as ML/year— a percentage of the share component,
 - (b) for an access licence specifying the share component as a number of unit shares— megalitres (*ML*) per unit share.
- (2) The sum of available water determinations made for any access licence must not exceed the following in any water year:
- (a) for an access licence specifying the share components in ML/year— 100% of the access licence share component,
 - (b) for an access licence specifying the share component as a number of unit shares— 1 ML per unit share of the access licence share component unless a lower amount is determined under clause 46.

48 Available water determinations for domestic and stock access licences

- (1) Unless the Minister otherwise determines, at the commencement of each water year an available water determination of 70% of the access licence share component is to be made for domestic and stock access licences.
- (2) Subject to clause 47 (2), further available water determinations may be made for domestic and stock access licences if water is available after making an available

water determination for regulated river (high security) access licences in accordance with clause 50 (1).

49 Available water determinations for local water utility access licences

- (1) Unless the Minister otherwise determines, at the commencement of each water year an available water determination of 70% of share components is to be made for local water utility access licences.
- (2) Subject to clause 47 (2), further available water determinations may be made for local water utility access licences if water is available after making an available water determination to regulated river (high security) access licences in accordance with clause 50 (1).

50 Available water determinations for regulated river (high security) access licences

- (1) Unless the Minister otherwise determines, at the commencement of each water year an available water determination of 0.5 ML per unit share is to be made for regulated river (high security) access licences.
- (2) Following the available water determination made in accordance with subclause (1), the Minister is to assess if water is available for the making of further available water determinations for regulated river (high security) access licences.
- (3) For the purposes of this assessment, water is not available unless sufficient water is available for the following:
 - (a) to meet the provisions in Part 6,
 - (b) to meet the requirements for basic landholder rights,
 - (c) to make available water determinations totalling 100% of access licence share components for both domestic and stock access licences and local water utility access licences,
 - (d) to provide for existing allocations in access licence water allocation accounts,
 - (e) to account for water losses associated with holding and delivering the water:
 - (i) as a result of the available water determination made in accordance with subclause (4), and
 - (ii) referred to in paragraphs (a) to (d) above.
- (4) If the Minister assesses under subclause (2) that water is available, the Minister is to consider making an available water determination for regulated river (high security) access licences, subject to clause 47 (2).

51 Available water determinations for regulated river (general security) access licences

- (1) The Minister is to assess, at least monthly, if water is available for the making of an available water determination for regulated river (general security) access licences, at least monthly.
- (2) For the purposes of this assessment, water is not available unless sufficient water is available for the following:
 - (a) to meet the provisions in Part 6,
 - (b) to meet the requirements for basic landholder rights,
 - (c) to make available water determinations totalling 100% of access licence share components for both domestic and stock access licences and local water utility access licences,
 - (d) to make available water determinations totalling 1 ML per unit share for regulated river (high security) access licences,
 - (e) to provide existing water allocations in access licence water allocation accounts,
 - (f) to account for water losses associated with holding and delivering the water:
 - (i) to be made available as a result of the available water determination under this clause, and
 - (ii) referred to in paragraphs (a) to (e) above.
- (1) If the Minister assesses under subclause (1) that water is available, the Minister is to consider making an available water determination (in ML per unit share) for regulated river (general security) access licences, subject to clause 47 (2).

52 (Repealed)

53 (Repealed)

[21] Clause 54 Specific purpose access licences

Omit “these water sources”. Insert instead “the water source” in clause 54 (1) and (2).

[22] Part 9

Omit the Part. Insert instead:

Notes.

- 1 Section 85 of the Act and the regulations provide for the keeping of water allocation accounts for access licences. The provisions in this Part limit the water that may be taken under, or assigned from, an access licence over a specified period of time, and

the unused water allocations in water allocation accounts that may be carried over from one water year to the next. These limits are in addition to any other limits on access licences for the taking or assignment of water. It is an offence under section 60C of the Act to take water under an access licence for which there is no or insufficient water allocation.

- 2 The provisions in this Part apply to the following persons:
- (a) the Minister in managing water allocation accounts,
 - (b) the access licence holder, as required by mandatory conditions imposed on the access licence under Part 12.

Division 1 Accounting for water allocation accounts

55 Debits from an individual water allocation account

For any access licence, the Minister must debit the volume of water extracted by water supply works nominated by the access licence from the water allocation account of the licence, except where clause 57 applies.

56 Limits on water allocation accounts and carryover

Water allocations remaining in a water allocation account must not be carried over from one water year to the next water year for any category of licence.

Division 2 Taking of uncontrolled flows

57 Taking of uncontrolled flows under regulated river (general security) access licences

Notes.

- 1 This clause is made under section 85 of the Act.
- 2 *Uncontrolled flow* is defined in the Dictionary.
- (1) The Minister may, by order published on the Department's website, authorise the holders of regulated river (general security) access licences to take water from uncontrolled flows that have not been credited to the water allocation accounts of the licences in accordance with the rules in this clause.
- (2) The taking of uncontrolled flows that arise from unregulated inflows to the water source, by holders of regulated river (general security) access licences that nominate a water supply work located in a segment of the water source specified in Column 1 of Table A must:
- (a) not be permitted to commence until flows have increased to the start flow specified in Column 3 of Table A as measured at the flow reference point specified in Column 4 of Table A for that segment of the water source, and

- (b) be required to cease when flows have decreased to less than the finish flow specified in Column 5 of Table A as measured at the flow reference point specified in Column 6 of Table A for that segment of the water source,
- whenever the sum of available water determinations for regulated river (general security) access licences in the water source is equal to that specified in Column 2 of Table A for the water year for that segment of the water source.
- (3) The taking of uncontrolled flows under subclause (2) must not be permitted to exceed 50% of the forecast uncontrolled flow volume above the finish flow specified in Column 5 of Table A for the segment of the water source as measured at:
- (a) the most downstream gauge for each segment of the water source, if the sum of available water determinations for regulated river (general security) access licences is less than 0.35 ML per unit of share component in the water year, or
- (b) Carroll Gap, if the sum of available water determinations for regulated river (general security) access licences is equal to or greater than 0.35 ML per unit of share component in the water year.

Table A —Uncontrolled flow arising from unregulated inflows

Column 1 Segment of the water source	Column 2: Total AWD (ML per unit share)	Column 3: Start flow (ML/day)	Column 4: Flow reference points	Column 5: Finish flow (ML/day)	Column 6: Flow reference points
Chaffey Dam to Paradise Weir	Less than 0.35	40	Peel River at Carroll Gap gauge (419006)	5	Any gauge within the segment in Column 1
Paradise Weir to Attunga Creek					
Attunga Creek to the Namoi River					
Chaffey Dam to Paradise Weir	Greater than or equal to 0.35	50	Peel River at Carroll Gap gauge (419006)	50	Peel River at Carroll Gap gauge (419006)
Paradise Weir to Attunga Creek					
Attunga Creek to the Namoi River					

- (4) The taking of uncontrolled flows that arise from ECA releases made under clause 31, by regulated river (general security) access licences that nominate a water supply work located from Chaffey Dam to the Peel River at Piallamore gauge (419015) must:

- (a) not commence until the flow arising from a release of water from the ECA is greater than or equal to 50 ML/day, as measured at the Peel River at Piallamore gauge (419015),
 - (b) cease when the flow arising from a release of water from the ECA is less than 50 ML/day, as measured at the Peel River at Piallamore gauge (419015),
 - (c) not be pumped into an on-farm storage.
- (5) The taking of uncontrolled flows that arise from ECA releases made under clause 31, by holders of regulated river (general security) access licences that nominate a water supply work located downstream of the Peel River at Piallamore gauge (419015) must:
- (a) not commence until the flow arising from a release of water from the ECA are greater than or equal to the forecasted flow specified in Column 2 of Table B as measured at the flow reference point specified in Column 3 of Table B, and
 - (b) cease when the flow arising from a release of water from the ECA is less than the finish flow specified in Column 4 of Table B as measured at the flow reference point specified in Column 5 of Table B,

whenever the sum of available water determinations for regulated river (general security) access licences in the water source is equal to that specified in Column 1 of Table B.

Table B — Flows arising from ECA releases from Chaffey Dam downstream of the Peel River at Piallamore gauge (419015)

Column 1: Total AWD (ML per unit share)	Column 2: Forecast flow (ML/day)	Column 3: Flow reference points	Column 4: Finish flow (ML/day)	Column 5: Flow reference points
Less than 0.35	40	Peel River at Caroll Gap gauge (419006)	5	Any gauge within the segment to which the announcement applies
Greater than or equal to 0.35	50	Peel River at Caroll Gap gauge (419006)	50	Peel River at Caroll Gap gauge (419006)

- (6) In any water year, the total amount of water permitted to be taken from uncontrolled flows by each regulated river (general security) access licence must not exceed the difference between:
- (a) the sum of available water determinations made for regulated river (general security) access licences in that water year, and

- (b) the limit of the sum of available water determinations that can be made for regulated river (general security) access licences under clause 46.
- (7) Regulated river (general security) access licence holders must be required to supply the operator with meter readings taken immediately prior to and after the taking of uncontrolled flows within 7 days of ceasing to take uncontrolled flow.
- (8) If the total amount of water taken from uncontrolled flows by a regulated river (general security) access licence exceeds the limits specified in subclause (6), then a volume equivalent to the exceedance will be debited from allocations credited to the access licence water allocation account in that water year.

Note. It is possible for the limits specified in subclause (6) to be exceeded if available water determinations increase after uncontrolled flows have been extracted.

[23] Part 10 Rules for water supply work

Omit the Part.

[24] Part 11 Access licence dealing rules

Omit the Part. Insert instead:

Notes.

- 1 Access licence dealings in the water source are subject to the provisions of the Act, the regulations, any access licence dealing principles established by order made under section 71Z of the Act and the access licence dealing rules established under this Part.
- 2 At the commencement of this Plan the *Access Licence Dealing Principles Order 2004* applies. The access licence dealing principles prevail over the access licence dealing rules in this Plan to the extent of any inconsistency, as provided under section 71Z (3) of the Act.
- 3 An application for a dealing may be refused, or conditions imposed on an access licence or water supply work approval at the time of a dealing to give effect to the provisions of this Plan.
- 4 This Part may be amended if individual daily extraction components are imposed on access licences in the water source.

82 Conversion of access licence to new category dealings

Dealings under section 71O of the Act are prohibited.

83 Assignment of rights dealings (within the water source or within a water management area)

- (1) A dealing under section 71Q of the Act within the water source is prohibited if the dealing is from a regulated river (high security) access licence that does not nominate a water supply located downstream of Jewry Street Bridge over the Peel River to a regulated river (high security) access licence that nominates a water supply work located downstream of the Jewry Street Bridge over the Peel River.
- (2) A dealing under section 71Q of the Act that is from or to an access licence in another water source is prohibited unless the dealing involves all of the following:
 - (a) the dealing is to an access licence in the Lower Namoi Regulated River Water Source,
 - (b) a conversion factor of 0.5 is applied to the increase in share component,
 - (c) the sum of share components of the following do not exceed 15,000:
 - (i) the share components assigned from the water source from a dealing under section 71Q of the Act in accordance with this subclause, and
 - (ii) the share components of an access licence cancelled from a dealing under section 71R of the Act in accordance with clause 84.

84 Amendment of share component dealings (change of water source)

Dealings under section 71R of the Act are prohibited unless the dealing involves all of the following:

- (a) the cancellation of an access licence with a share component that specifies the water source,
- (b) the issuing of an access licence with a share component that specifies the Lower Namoi Regulated River Water Source,
- (c) the share component of the access licence issued being equal to 0.5 times the share component of the cancelled access licence,
- (d) the sum of share components of the following does not exceed 15,000:
 - (i) the share components of cancelled access licences from dealings under section 71R of the Act in accordance with this clause, and
 - (ii) the share components assigned from the water source from dealings under section 71Q of the Act in accordance with clause 83 (2).

Note. Rules for an inter-valley trading account, as set out in clause 32 of this Plan will come into effect when dealings under this clause and clause 83 (2) exceed 7,500 ML.

85 Interstate access licence transfer and assignment of water allocations

- (1) Dealings under section 71U of the Act involving the interstate transfer of an access licence to or from the water source are prohibited.
- (2) Dealings under section 71V of the Act involving the interstate assignment of water allocations to or from the water source are prohibited.

86 Assignment of water allocations dealings

Dealings under section 71T of the Act are prohibited in any of the following circumstances:

- (a) if no available water determination has been made for regulated river (general security) access licences and the dealing involves an assignment of water allocation from an access licence that does not nominate a water supply work located downstream of the Jewry Bridge over the Peel River to an access licence that nominates a water supply work located downstream of the Jewry Street Bridge over the Peel River,
- (b) the dealing involves an assignment of water allocation to or from an access licence in another water source.

87 Nomination of water supply work dealings

Dealings under section 71W of the Act are prohibited in any of the following circumstances:

- (a) the dealing involves a regulated river (high security) access licence that does not nominate a water supply work located downstream of the Jewry Street Bridge over the Peel River being amended to nominate a water supply work located downstream of the Jewry Street Bridge over the Peel River,
- (b) the dealing involves a regulated river (high security) access licence that nominates a water supply work located downstream of the Jewry Street Bridge over the Peel River being amended to nominate a water supply work located downstream of the original water supply work,
- (c) the dealing involves an access licence in the water source being amended to nominate a water supply work located in another water source.

88 (Repealed)

[25] Clause 89 General

Omit clauses 89 (2) and (3).

[26] Clause 89 (5)

Omit “in the relevant water sources” in clause 89 (5).

[27] Clause 90 General

Omit the clause. Insert instead:

- (1) All water supply work approvals for water supply works must have mandatory conditions to give effect to the following:
- (a) all approval holders must keep records:
 - (i) of any water management infrastructure used in connection with the operation of the water supply work, and
 - (ii) of any cropping carried out using the water taken through the water supply work including the type of crop, area cropped, and dates of planting and harvesting,
 - (b) where metering equipment has been installed for use in connection with a water supply work, the approval holder must keep records of the time, date and quantity of water taken through the water supply work,
 - (c) where metering equipment has not been installed for use in connection with a water supply work, the approval holder must keep records of all pumping activities for the water supply work including pump running hours, pump power usage and pump fuel usage,
 - (d) when required by the Minister by notice in writing, the approval holder must provide any records kept under paragraphs (a), (b) or (c) to the Minister within the time specified in the notice and to the standard specified in the notice,
 - (e) the records required to be kept under paragraphs (a), (b) or (c) must be kept for the duration of the approval,
 - (f) when required by the Minister by notice in writing, metering equipment must be installed and maintained for use in connection with the water supply work,
 - (g) if the Minister has specified in the notice issued under paragraph (f) that metering equipment must be of a type or standard or has specified other criteria, any metering equipment installed, operated or maintained must comply with any type, standard or the other criteria specified by the Minister, and
 - (h) any other conditions required to implement the provisions of this Plan.
- (2) If an approval for a water supply work is subject to a mandatory condition imposed by Part 10 or Part 11 of the *Water Management (General) Regulation 2018* relating to the recording or reporting of water that is taken by the work, subclause (1) (a) to (e) cease to have effect in relation to the work on the day on which the condition applies to the approval.

Note. The *Water Management (General) Regulation 2018* will impose a mandatory condition requiring record keeping on access licences and approvals in the water source from 1 December 2021.

- (3) If an approval for a water supply work is subject to the mandatory metering equipment condition in relation to the work, subclause (1) (f) and (g) cease to have effect in relation to the work on the day on which the condition applies to the approval.
- (4) Subclause (1) is taken to be repealed on the day on which the temporary exemption from the mandatory metering equipment condition ceases to apply to the water source in accordance with clause 230 (1) of the *Water Management (General) Regulation 2018*.

Note. Clause 230 of the *Water Management (General) Regulation 2018* provides that the mandatory metering equipment condition applies to new works required to have a meter from 1 April 2019, and to other access licences and approvals in the water source from 1 December 2021.

[28] Clause 91 Water supply work approvals in the Peel Alluvium and Feel Fractured Rock Water Sources

Omit the clause. Insert instead:

Clause 91 Conditions to give effect to an authorisation under section 8 of the *Water Supply (Critical Needs) Act 2019*

The water supply work approval held by WaterNSW authorising the operation of Chaffey Dam must have a mandatory condition to give effect to the conditions of any authorisation under section 8 of the *Water Supply (Critical Needs) Act 2019* in relation to the development of the Chaffey Dam to Dungowan Village pipeline, that refer to the operation of the Dam or the release of water from it.

[29] Clause 93 Part 1

Omit the clause. Insert instead:

Clause 93 Part 1

Part 1 may be amended to add, modify or remove a river or segment of a river, to or from the water source providing that:

- (a) any amendment is consistent with any applicable regulated river order, and
- (b) the Minister is satisfied that there will be no impact on the water available to the environment under Part 6 or on the available water to any access licence in the water source.

[30] Clause 94 Part 9

Omit clauses 94 (2), (3) and (4).

[31] Clause 95 Part 10

Omit the clause.

[32] **Clause 97 Part 12**

Omit the clause.

[33] **Clause 98 Schedules**

Omit clauses 98 (1), (2), (3), (4), (6) and (7).

[34] **Clause 99 Other**

Omit the clause. Insert instead:

Clause 99 Other

- (1) This Plan may be amended to include new environmental rules in Part 6 which better align with the Namoi Long Term Water Plan, subject to there being no increased impact on total average annual extractions permitted under the long-term average annual extraction limit applying at the commencement of this Plan.
- (2) This Plan may be amended to provide for the carryover of water remaining in the ECA in from one water year to the next in Part 6.
- (3) This Plan may be amended to provide alternate rules to the two-step process for assessing compliance with the long-term average annual extraction limit in Division 2 of Part 7.
- (4) An amendment authorised by this Plan is taken to include any consequential amendments required to be made to this Plan to give effect to that particular amendment.
- (5) Consequential amendments may be made to this Plan as a result of an amendment to the Act or regulations.

Schedule 1 Dictionary

Aboriginal person has the same meaning as under section 4 of the *Aboriginal Land Rights Act 1983*.

Annual actual take has the same meaning as it has in section 6.10 of the Basin Plan.

Annual permitted take has the same meaning as it has in section 6.10 of the Basin Plan.

Basin Plan means the Basin Plan 2012 made under section 44 (3) (b) (i) of the *Water Act 2007* of the Commonwealth.

broad objectives define the desired long term outcomes of this Plan, and progress is evaluated by considering the cumulative achievement of the associated targeted objectives.

Cap baseline conditions are as agreed under the Murray Darling Basin Agreement that was in place at the commencement of the *Water Sharing Plan for the Peel Valley Regulated, Unregulated, Alluvium and Fractured Rock Water Sources 2010*.

ECA means the environmental contingency allowance referred to in clause 31.

floodplain harvesting means the collection, extraction or impoundment of water flowing across floodplains, including rainfall runoff and overbank flow, excluding the take of water pursuant to any of the following:

- (a) a water access licence other than a floodplain harvesting access licence,
- (b) a basic landholder right,
- (c) an exemption from the need to hold an access licence to take water under the Act.

flow regimes mean, collectively, the magnitudes, durations, frequency and patterns of flow that characterise a river or water source.

Minister means the Minister administering the Act.

ML means megalitres.

Murray-Darling Basin Agreement means the Murray-Darling Basin Agreement as set out in Schedule 1 of the *Water Act 2007* of the Commonwealth.

natural flow means a flow that occurs in a watershed or waterbody under natural unregulated conditions.

NSW Environmental Water Manager means the NSW Government department or agency whose responsibility it is to manage licensed environmental water that is held by the NSW Government.

Note. As at 1 July 2020, this is the NSW Department of Planning, Industry and Environment – Environment, Energy and Science (EES).

operator means the operator of the water supply system for the water source.

Note. As at 1 July 2019, this is WaterNSW.

plantation forestry means a commercial plantation as defined in section 1.07 of the Basin Plan.

rainfall runoff means that portion of rainfall that runs off the land.

supply capability means the rate at which the Minister determines water can be supplied to a segment of the water source without incurring unacceptable transmission losses.

target ecological populations are communities of one or more species that are monitored to evaluate the success of targeted objectives for the environment. Populations must be easily monitored (i.e. not rare or cryptic) and may be linked to conservation or other environmental priorities.

the water source means the Peel Regulated River within the Namoi Water Management Area.

Transmission losses means the additional water required to ensure that a specified quantity of water is delivered to a specified delivery point.

uncontrolled flow means flow in excess of that needed to meet the following:

- (a) the environmental release rules in Part 6, including flows arising from ECA releases that are greater than the volumes specified in subclauses 57 (4) or (5),
- (b) basic landholder rights,
- (c) water orders placed by access licences.

water source as defined in clause 4.

water storage means a state owned dam, weir or other structure that is used to regulate and manage river flows in the water source and the water body impounded by this structure.

weighted average unit price means the total value of all units sold divided by the number of units sold for a monetary value.
